Crop Residues: Issues Relating to Collection, Transportation and Storage

A team of researchers at the Rochester Institute of Technology in New York is using wastewater to cultivate algae for biodiesel production. The project, which has been ongoing for two years, ultimately aims to provide rural communities with a technology that can aid in wastewater treatment while providing the economic development opportunity of biodiesel production.

Deadline: October 25

Biomass holding company expands pellet capacity

Only a few times in our nation's history has a generation been called to action or to discovery. Among these seminal times Americans helped win a world war, demand civil rights for all, made the first steps on the moon and opened the doors to a entirely new world with the Internet.

New Hampshire expands pellet heat incentive

Secretary of Energy Steven Chu detailed President Obama's \$29.5 billion Fiscal Year 2012 budget request for the U.S. DOE this week. The request is part of an administration-wide plan to win the future by out-innovating, out-educating and out-building the world.

New Wisconsin governor ends UW-Madison biomass project

If metabolic disruption (MDT) is truly successful, it will be able to interrupt metabolic strategies used to regulate a cell's energy consumption, production and storage. A cell that is dividing will have a different energy level than one that is not, and will use an alternative metabolic strategy, according to Viral Genetics, a research company.
